SANITATION FACILITY AT ST. JOHNS KAYORO HEALTH CENTRE II

Update: September 2016

Construction of a new sanitation facility is underway at the St. Johns Kayoro Health Centre in Uganda. Once completed, the expanded facility will position the health center for future growth. Not only is the new latrine and bath building larger than the current one, but it is also located further from the medical building, thus opening room for clinic expansion.

The new sanitation facility will have a total of 5 toilets and 2 bathrooms, including one bathroom and two toilet rooms for women, the same for men, and a special toilet room for persons with disabilities.

Construction of the new sanitation facility, funded by a $5000 grant from St. John the Evangelist Episcopal Church, is part of Kayoro Health Centre's larger infrastructure expansion plan, including construction of a maternity ward and staff quarters.

CONSTRUCTION PROGRESS

DAY 1: Arrival of building material

DAY 2: Commencement of work and laying foundation
DAY 3: Laying concrete slab

DAY 4: Complete concrete slab with provision for ramp for persons with disabilities

DAY 5: Raising of the sanitation facility walls

DAY 6: Completion of wall raising. Ongoing ground work; demarcation for female and male shower areas
